

BURNS can be effectively treated with essential oil of **BLUE CHAMOMILE** - because it is anti-Inflammatory. If it is a serious burn - also add **THYME**, to prevent any infection.

- * My personal worst experience, was when I accidentally tipped over a large pot of boiling water on a stove, all over my arm, from my wrist to my elbow.
- * Luckily, I always had a small jar of my own burns cream with me - to rub some some on my bald head when I was outside. I could stay up to 20 minutes in direct sunlight - and not end up with any blisters.
- * **BLUE CHAMOMILE** contains natural **AZULENE** which is anti inflammatory - interestingly a blue colour.
- * I rubbed my burns cream on my burnt arm, especially one area that was quite deep.
- * Later, I made up a new batch of burns cream, adding a few drops of **THYME** essential oil to help prevent any infection, because it is highly anti bacterial. I applied this new burns cream twice daily, and bandaged my arm.
- * 2 weeks later - my whole arm had healed - with no sign of any blisters or scars, just a little bit more to heal in the deep burns area, that took another week or so to completely heal.
- * Applying burns cream as soon as possible after getting a burn, means it is possible to prevent any burns blisters or any indication that a burn was ever there.
- * it would be worthwhile to have a jar made up as part of a home 1st AID kit.
