

**INSECT BITES** are effectively treated with **BENZOIN** essential oil. It has very powerful cell healing properties. Just apply neat, from the bottle, Or mix up a few drops in any vegetable oil or moisturiser cream.

- \* **BENZOIN** is one of the really special essential oils - because it regenerates cell tissue.
- \* It is actually a resinoid, very thick and has a beautiful fragrance - often needing to warm up to get it out of the bottle. Interestingly, it is collected in jam tins, hung underneath a cut in the bark of a tree. It oozes out, just like a human ulcer - and is actually effective for treating ulcers.
- \* It gives immediate relief for all insect bites - just rub it on neat, straight from the bottle - or mix a few drops into any vegetable oil, or moisturiser cream.
- \* Other skin conditions, such as cuts and bruises, where there is skin damage also benefit.
- \* I always make sure I have a bottle in my 1st Aid kit.
- \* My classic case was treating friend who got a white tailed spider bite on her knee. These bites quickly develop into ulcers - that can result in amputations, if not able to be fixed.
- \* I mixed up some skin cream with several drops of **BENZOIN**.
- \* Seeing that an ulcer was already developing, I also added Blue Chamomile for Inflammation, and Thyme oil for anti bacterial properties and preventing Infection. I just wanted as strong a blend as possible.
- \* Within minutes - an ulcerous hole was developing on the knee - and a green infection was oozing out.
- \* This continued for about 2 or 3 days - then stopped.
- \* After a few more days - the ulcerous hole started shrinking - and in 2 weeks was completely gone.
